

Full UI/UX Audit & Optimization Report

Website: vipulamila.github.io/merge-website/ | Prepared for Development Team

1. Global Navigation & Branding

Header Optimization

- **Sticky Glassmorphism:** Implement `backdrop-filter: blur(10px)` on the navbar to maintain context while scrolling.
- **Scrollspy Integration:** Links should automatically highlight based on the viewport position.
- **Favicon:** Add a 32x32px branded icon to replace the default browser globe.

MOTION

Header Shrink: Reduce navbar height by 20% on scroll to maximize content real estate.

2. Hero & Visual Identity

First Impression (Above the Fold)

- **Typography Scaling:** Increase H1 font-weight to 800 and set line-height to 1.1 for a high-impact "Power Headline."
- **Depth with Shadows:** Replace solid borders with soft shadows: `box-shadow: 0 20px 40px rgba(0,0,0,0.08);`.

MOTION

Staggered Reveal: Animate text elements with a 0.2s delay between headline, sub-headline, and CTA button.

3. Layout & Component Architecture

Grid & Consistency

- **Uniform Card Heights:** Use Flexbox `align-self: stretch` or Bootstrap `.h-100` to ensure service cards align perfectly.
- **Whitespace Policy:** Implement a standard 100px vertical padding (`py-5` in Bootstrap) for all sections.
- **Circular Media:** All team or testimonial images must be forced to 1:1 aspect ratio with `border-radius: 50%`.

4. Interaction & Feedback

Micro-interactions

- **Magnetic Buttons:** Use a light scale effect (1.05) on hover to provide tactile feedback.
- **Smooth Internal Linking:** Set `scroll-behavior: smooth` in global CSS for a refined transition between sections.

MOTION

Entrance Animations: Implement AOS (Animate on Scroll) with fade-up effects for all card-based sections.

5. Performance & Accessibility

Technical Excellence

- **Asset Optimization:** Convert all `.jpg/.png` assets to `.webp` format for 30% faster load speeds.
- **Color Contrast:** Audit light gray text. Ensure a minimum contrast ratio of 4.5:1 against the background for WCAG compliance.
- **Skeleton Loading:** Display shimmer placeholders while images or dynamic components are fetching.

Recommended Implementation Stack

Libraries: AOS.js (Scroll Anims), GSAP (Complex Motion), FontAwesome (Icons), Inter/Poppins (Google Fonts).
